

KEY INSIGHTS FROM YOUR DASHBOARD

Overall, Job Market Overview

- Total Jobs Analysed: **4,473**
- Average Annual Salary: **₹6.07 Lakhs**
- Maximum Industry Salary: **₹12.8 Lakhs**
- Salary grows significantly with experience.

The dataset provides a strong representation of mid-level Indian job market trends (2016).

Most Demanded Skills

- **IT Software – Application Programming** dominates hiring demand.
- Sales and ITES are the next most demanded roles.
- HR and Accounts follow but at significantly lower demand.

Insight:

The IT sector was the strongest hiring driver, showing technology-focused market demand.

City-wise Job Demand

Top hiring cities include:

- Bengaluru
- Mumbai
- Chennai
- Delhi NCR

Insight:

Major metro cities dominate hiring activity, indicating centralized job market concentration.

Salary Trends

- Average salary: ₹6.07 Lakhs
- Salary increases steadily with experience.
- Senior-level roles (>15 years' experience) show sharp salary growth.
- Certain industries (IT & Banking) offer higher compensation.

Insight:

Experience plays a critical role in salary progression, especially in technical industries.

Hiring Trends Over Time

- Higher hiring activity observed in early months.

- Gradual decline mid-year.
- Indicates possible seasonal recruitment behaviour.

Industry Distribution

- IT Software & Services accounts for nearly half of total jobs.
- BPO and Banking sectors follow.
- Education and Healthcare contribute smaller shares.

Insight:

Technology-driven industries dominate the employment landscape.

Project Overview

This project analyses job market trends using job portal data to identify:

- Most demanded skills
- Salary trends
- City-wise job demand
- Industry distribution
- Experience-based salary growth

The dashboard was built using Power BI after data cleaning and transformation in Google Collab (Python).

Dataset Information

- Total Records: 4,473
- Source: Job portal dataset (India, 2016)
- Features Included:
 - Job Title
 - Industry
 - Skill Category
 - City
 - Experience (Years)
 - Average Salary
 - Posting Date

Data Cleaning & Transformation

Data preprocessing was performed in Google Collab using Python:

- Removed missing and irrelevant columns
- Extracted numeric salary from salary ranges
- Converted experience into numeric format
- Standardized city names
- Extracted Year and Month from posting date
- Handled missing values

Final cleaned dataset exported for Power BI.

Dashboard Components

KPI Section

- Total Jobs
- Average Salary
- Maximum Industry Salary
- Salary per Experience

Visualizations

1. Job Demand by Skill Category (Bar Chart)
2. City-wise Job Demand (Map / Bar)
3. Hiring Trend by Month (Line Chart)
4. Salary vs Experience (Scatter Plot)
5. Industry Distribution (Donut Chart)
6. Salary by Industry (Bar Chart)

Key Insights

- IT Software sector dominates hiring demand.
- Salary increases significantly with experience.
- Metro cities (Bengaluru, Mumbai, Chennai) lead job postings.
- Technical roles offer higher compensation.

- Industry distribution shows technology-driven employment landscape.

Tools & Technologies Used

- Python (Pandas, NumPy)
- Google Collab
- Power BI
- DAX Measures
